

I'm originally from Sarawak but have called West Malaysia home since returning from the United States after my studies. I initially pursued a career as a scuba diving professional, which allowed me to explore Malaysia's stunning islands. However, life took a turn when I got married and settled in Selangor. In 2008, I founded a photography business, which I poured my heart into.

Becoming a mother to my only child brought immense joy to my life, but my love for animals has always been a constant. I've had a deep connection with animals since childhood and was fortunate to share this compassion with my husband.

In 2019, I became deeply concerned about the plight of stray dogs in my neighborhood. Disheartened by disappointing outcomes from local council interventions, I felt compelled to act. This marked the beginning of my journey in animal advocacy.

Teaming up with like-minded volunteers, we dove into hands-on animal rescue work, embracing the challenges and learning from trial and error. This newfound purpose became even more vital during the pandemic, as my photography career was put on hold.

Our efforts evolved, and we began focusing on TNRM (Trap-Neuter-Return-Manage) with the guidance of veterinarians and fellow advocates. We saw progress with fewer strays on the streets and no more pregnant females bringing more puppies into the world.

In 2023, I redirected my focus towards a more sustainable solution by founding the NGO "Animal Kindness Coalition." We aim to spearhead TNRM projects in Petaling Jaya, working collaboratively with the local council MBPJ and the community.

As a parent, I aspire to raise a compassionate, responsible, and proactive child who chooses to be part of the solution. I believe that leading by example is the best way to instill these values.

My commitment to animal welfare is driven by a belief in the kindness of people. I aspire to inspire kind-hearted individuals to be the voice for misunderstood animals and promote harmony within our communities. Together, we can create a better world for both humans and animals.
